

Risk Control and Assessment Principles of Far East Horizon

Far East Horizon has always followed the principle of prudent risk management, selected stable basic industries or sub industries and high-quality customers, and effectively laid a solid foundation for asset security.

In the process of project introduction, the risks in the process of asset formation are effectively reduced through stricter customer screening standards, due diligence methods in line with the characteristics of the industry, flexible and effective product design capabilities and sufficient risk countermeasures.

For the stock assets, Far East Horizon has been monitoring the business operations of its customers and rent repayment during the lease period to make sure potential risks could be detected or avoided in time. When the assets are at risk, the overall safety of the assets is ensured by timely and effective use of risk assets treatment methods in line with the characteristics of the industry.
